

NUMBER LOOKUP SERVICE

Accurate, reliable mobile number information to increase reachability, reduce delivery costs, strengthen security.

Number Lookup Service offers valuable insight on phone numbers using the Mobile Number Portability (MNP) Database and Real-time (HLR Live) Lookup. The MNP Database obtains mobile phone number details from various numbering sources, taking into account the Number Portability. The Live Lookup obtains details from the HLR query against the numbers.

Number Lookup Service checks phone numbers and provides a range of essential data for database cleansing, delivery cost optimization, and fraud risk evaluation. The service enables validation of mobile phone numbers, identifies mobile vs landline numbers, and obtains the country and network codes including the original network codes if numbers are ported. Real-time subscriber data including subscriber availability indicator, roaming indicator, and roaming information can also be obtained.

Accurate Customer Databases

Keep your database up-to-date with our Number Lookup Service. Our service identifies incorrect formatted and un-used phone numbers, which you can remove from your database, giving you a better sense of how many customers you're really connecting with. It also helps to validate phone numbers during account registration, ensuring you have the correct customer contact.

Reduce Delivery Cost

Get insight on mobile phone numbers to optimize SMS and voice routing. Our service determines the validity of a mobile number, finds its current network and whether the number has been ported, and optionally the live subscriber data. Using the information, you can select the optimal route for message delivery and voice calls to increase reachability and reduce delivery cost.

Strengthen Security

Assess fraud risk with real-time live subscriber status and roaming information for fraud risk assessment. Our service supplies the subscriber availability indicator and the current mobile phone location so you can compare with its previous location before granting an online, high value financial transaction, preventing fraudulent activities.

Key Features

- Mobile vs landline numbers identification
- Detection of incorrectly formatted numbers
- Accurate network code for every telephone number
- Subscriber availability indicator and roaming information
- Mobile Number Portability indicator
- Easy integration with HTTPS and ENUM
- Cloud-based platform with high availability
- Security and compliance

ACCURATE DATA AT YOUR FINGER TIPS.

MNP Database

The MNP Database provides accurate, essential mobile phone number data. With our global number portability check, you can reach every number easily and effortlessly.

Live Lookup

Live Lookup offers additional intelligence of mobile phone numbers based on the mobile network operators' HLRs. The service provides the subscriber availability status and roaming information which can be used to optimize routing and reduce fraudulent activities.
